/note="Organ: Bye; Vector: pCMVSport6; RNA was extracted from 2 human lacrimal glands. A directionally cloned cDNA library in the pCMVSPORT6 vector(Life Technologies) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript plasmid System full details of which are contained in the Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pGACTAGTTCTAGATCGCGACCGGCCC(T)15-3']. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel method for inducing apoptosis which comprises overexpressing the C1D gene (I). The method is particularly used to treat tumors and can also be used in gene therapy. The method he no side effects on normal cells (contrast known methods of inducing apoptosis such as cytotoxins and radiation), and may be effective on cells resistant to conventional treatments. Overexpression of (I) is sufficient itself to induce apoptosis but the effect may be increased transfected with (I) undergo apoptosis, they release factors that kill neighboring, non-transfected cells (bystander effect). This sequence encodes the human C1D protein described in the method of the invention

Screening for anti-neoplastic agent involves exposing agent to be tested for anti-neoplastic activity, and c in expression of a gene of a signature gene set.

g cells to a chemical determining a change

2002-188264/24.

The present invention neoplastic agent. The

describes a method (M1) for screening for an method involves exposing cells to a chemical

anti-agent

Claim 1; SEQ ID NO 318; 44pp; English.

(I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oseophageal, ovarian, kidney, prostate or pancreatic cancer, lung, thyroid, oseophageal, ovarian, kidney, prostate or pancreatic cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC DNA chip analysis as given in the specification, and comparing the CC expression level to an expression level in an unactivated GC, where CC differential expression of Gs is indicative of GCA. Also included are CC modulating (M2) GA by contacting GC with an agent that alters the CC expression of at least one gene in Gs; (2) screening (M3) for an agent crissue, an allergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease using the gene expression CC tissue, an allergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease, by detecting the level of CC expression in a sample of the tissue of gene(s) from Gs where the level of expression in a sample of the tissue of gene(s) from Gs where the level (M5) an inflammation (especially chronic) in a crisponse in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of cresponse in a subject, exposure of a subject to a pathogen or sterile inflammation (in a tissue, an allergic cresponse in a subject, exposure of a subject to a pathogen or sterile inflammation with an CC inflammation in a tissue; M4 is useful for modulating GA; M3 is useful for exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic cresponse in a subject to a pathogen or sterile inflammatory disease (e.g. combined to a pathogen or sterile inflammatory disease (e.g. combined pathogen or sterile inflammatory disease (e.g. combined pathogen cression injury, renal repertusion injury, ARDS, adult cresponse in a subject to a pathogen or sterile inflammatory disease (c.g. combined pathogen cressed in granulocytes. Note: The sequence data for this patent did conform part of the printed specification, but was obtained in electronic format directly from MFO at the sequence data for this patent did creditly from MFO at sequence data for this patent did cre

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method (M1) for determining the subtype of leukaemia cells and whether a patient sample contains leukaemia cells. The method comprises determining the expression profile of a group of markers in a patient sample. The method is useful for determining the presence of leukaemia cells, its types or subtypes, and for the preparation of a medicament for treating leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1172
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID

The method comprises determining the expression proof a group of markers in a patient sample. The method is useful for determining the presence of leukaemia cells, its types or subtypes, for the preparation of a medicament for treating leukaemia.

New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for surveying tissues

Claim 15; SEQ ID NO 1780; 80pp; English

CC gene expression (comprising a plurality of single exon nucleic acid compression (comprising a plurality of single exon microarray for measuring human gene expression, a method of cexon microarray for measuring human gene expression, a method of contiguous amino acids of any of the above mentioned amino acid sequences (optionally with conservative amino acid substitutions), an civolary to measure gene expression, a method of contiguous amino acids of any of the above mentioned amino acid sequences (optionally with conservative amino acid substitutions), an ci solated antibody that binds specifically to a peptide cited above, comethods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing comman gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe cited above. The probe, methods and apparatus are useful in gene corresponding the probes may be used as tools for surveying considered to the probes are used in identifying and characterising constituting genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising gross alterations in the genomic locus that includes their exon, in assessing considered exon probe of the invention. Note: The sequence is a human constitution probe of the invention. Note: The sequence data for this constant directly from USPO at The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human addressable set of single exon nucleic acid probes for measuring human

useful for inhibiting cellular function of cofactor and for treating metabolic disorders, immunological indications and hormonal dysfunctions.
                                                                                         Fig 2;
                                                                                       68pp;
                                                                                       English.
```

The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present cDNA sequence represents the reverse complement of the mammalian nuclear receptor cofactor CF7 gene sequence

The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present cDNA sequence encodes the mammalian nuclear receptor cofactor CF7 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel nuclear receptor cofactors, CF7 and CF8 for identifying modulators useful for inhibiting cellular function of cofactor and for treating metabolic disorders, immunological indications and hormonal dysfunctions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 426 BP; 158 A; 64 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Fig 1; 68pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Jackson

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
The invention relates to an isolated polynucleotide encoding a nuclear CC receptor cofactor, also known as CF6. The polynucleotide or encoded CC protein is useful for construction of multiple nuclear receptor cofactor Specific sequence alignments, preferably for the construction of protein CC sequence alignments. The protein is useful for screening agents capable CC of inhibiting the cellular function of the cofactor CF6. The CC polynucleotide is useful for making vectors and for transforming cells, both of which are ultimately useful for production of the CP6 protein. CC They are also useful as scientific research tools for developing nucleic CC acid probes for determining expression levels of the cofactor gene, e.g. CC useful for diseased or otherwise abnormal states. They are particularly useful for diseased or otherwise abnormal states. They are particularly CC useful for diseased or otherwise abnormal states. They are particularly canalytical tools such as antisense oligonucleotide for selectively inhibiting expression of the cofactor gene to determine physiological contains and therefore, for screening for drugs useful in regulating physiological responses associated with the cofactors such as metabolic diseases. The proteins are also useful for developing neurosystemic diseases. The proteins are also useful for developing antibodies for detection of the proteins are also useful for developing useful can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 1; 97pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polynucleotide and polypeptide of novel nuclear receptor cofactor useful for screening drugs regulating cofactor-associated physiological responses e.g. hormonal dysfunctions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to design primers for a polymerase chain reaction and are also used model the three-dimensional structure of the protein. This sequence represents the sense strand of the CF6 gene coding region. (Note: the sequence appears to be a fragment of the CF6 gene as the sequence different the CF6 gene sequence given in Fig 1 (also designated SEQ ID NO of the specification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 420 BP; 155 A;

The invention relates to modulators having an improved therapeutic profile. The method is useful for identifying compounds that bind to a nuclear receptor and exhibit cell type specific actions. It is also useful for identifying modulators of nuclear receptors that are useful in treating diseases e.g., diabetes, hyperlipidaemia, obesity, atherosclerosis, etc. The present sequence is human co-repressor DNA used to illustrate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          문
                                                                           This invention describes a novel method for inducing apoptosis which comprises overexpressing the CID gene (I). The method is particularly used to treat tumors and can also be used in gene therapy. The method no side effects on normal cells (contrast known methods of inducing apoptosis such as cytotoxins and radiation), and may be effective on cells resistant to conventional treatments. Overexpression of (I) is sufficient itself to induce apoptosis but the effect may be increased when used in combination with other anti-tumor methods. When cells transfected with (I) undergo apoptosis, they release factors that kill neighboring, non-transfected cells (bystander effect). This sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present cDNA sequence encodes the mammalian nuclear receptor cofactor CF8 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 useful for inhibiting cellular function of cofactor and for metabolic disorders, immunological indications and hormonal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present cDNA sequence represents the reverse complement of the mammalian nuclear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nuclear receptor cofactors, CF7 and CF8 for identifying modulators useful for inhibiting cellular function of cofactor and for treating metabolic disorders, immunological indications and hormonal dysfunctions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 420 BP; 105 A; 100 C;

An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dTM primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with inteact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID NO 1235; 71pp + Sequence Listing; English.
